

# TENNESSEE: ECONOMIC FUTURE WITH EDUCATIONAL REFORM

---

This file contains detailed projections and information from the article:

Eric A. Hanushek, Jens Ruhose, and Ludger Woessmann, “It pays to improve school quality: States that boost student achievement could reap large economic gains,” *Education Next*, Summer 2016

<http://educationnext.org/pays-improve-school-quality-student-achievement-economic-gain/>

# U.S. and State Interests

- Future depends on skills of the population
- True for the nation *and* for individual states
- Improvements in student achievement return very large economic returns to states
  - Feasible gains would provide more incomes to state than total spending on K-12 education

# Cognitive Skills and Long Run Economic Growth: International Evidence

Growth in GDP/pop over 1960-2000 as related to math and science skills and conditional on income levels in 1960

# Test Scores and Growth: U.S. states

Growth in GDP/pop over 1970-2010 for states as related to math skills and conditional on income levels in 1970

# Tennessee's Position in the U.S.

- The economic performance of states is dependent upon the skills of their populations.
- States compete with each other in terms of the skills of their population.
- National Assessment of Educational Progress (NAEP) for 2013 tracks current schools

# NAEP 8th Grade Mathematics, 2013

**Tennessee is at 43rd percentile of U.S. distribution**  
**Tennessee is at 27th percentile of Massachusetts distribution**

# NAEP 8th Grade Mathematics, White Students, 2013

**Tennessee is at 39th percentile of U.S. distribution**  
**Tennessee is at 26th percentile of Massachusetts distribution**

# Projection Methodology

- Educational improvements steady until reaching the post-2015 goals in 2030
- Work life of 40 years
- Growth rate is based on the average skill of workers
- Consider horizon of somebody born today (80 years)
- Future gains in GDP are discounted to the present with a 3% discount rate
  - Implies the projections are directly comparable to current levels of GDP

# Value of Improvement to Tennessee

1. Increasing average achievement by  $\frac{1}{4}$  standard deviation.
2. Bringing each state up to the best state (Minnesota).
3. Bringing each state up to the best in the geographic division (Kentucky).
4. Bringing all students in a state up to the NAEP basic level.
5. Scenario 2 with single state improvement.
6. Equaling Canada
7. Equaling Finland

## 2. Equal Minnesota level: 671% of current GDP

# 3. Equal Kentucky level: 136% of Current GDP

# 4. All students to basic: 248% of state GDP

# 5. Single v. All States Improve to Best

# International Challenge

- Unfortunately the challenge extends beyond U.S. borders and includes countries around the world.
- Other countries are producing students with both more education and better education.

## Percentage of students in the class of 2011 at the proficient level in math in U.S. states and foreign

jurisdictions participating in PISA 2009. (Figure 1)

# 6. Equal Canadian level: 679% of current GDP

# 7. Equal Finnish level: 749% of current GDP

# Summary of Improvement: Tennessee

Improvement	Discounted reform billion \$'s	% current GDP	% future GDP without reform
1. ¼ stnd deviation	841	262	5.6
2. Equal Minnesota	2,152	671	14.4
3. Equal division best (KY)	436	136	2.9
4. All at least basic	796	248	5.3
5. Single state to best (MN)	563	176	3.8
6. Equal Canada	2,178	679	14.5
7. Equal Finland	2,402	749	16.0

# THE CHALLENGE

---

# Improvement is Possible: Gains on NAEP 1992-2009

# No Simple Answers

Improvement is possible but not easy
